SUMMARY

Frontend and product engineer with five years building web and mobile applications, mostly for fintech and digital media companies in Nigeria. I work on the parts users touch and the security that sits under them — wallets, payments, identity verification, authentication across multiple apps — and increasingly on business automation that removes repetitive work entirely. React, Next.js, TypeScript and React Native, with n8n and GoHighLevel for automation.

EXPERIENCE

Senior Frontend Engineer · DKingsmen (Remote) Aug 2023 — Present

- **CREAM Platform** — lead the frontend of a creator media platform (music, video, subscriptions). Rebuilt the original React/Vite SPA as a Next.js 16 backend-for-frontend over a Rust API; improved page performance by around 60% through route-level code splitting, manual chunking and deferred loading.
- **CREAM Pay** — wallet for transfers, withdrawals and identity verification (BVN/NIN). Built a two-tier security model where an ordinary session and permission to move money are separate, re-verified server-side; plus transaction-PIN gating and asynchronous KYC.
- **CREAM Games** — games and rewards on the web (Next.js 16) and as a pure React Native app. Token economy wired to Paystack and Flutterwave, push notifications via FCM and APNs, automated store releases through GitHub Actions.
- **NYPD** — talent platform delivered with the United Nations and the Federal Government of Nigeria; 80 creatives, public voting with live engagement metrics, 1 million naira in prizes for winning entries.
- Built the shared sign-in across all CREAM apps: hand-rolled OIDC authorization-code + PKCE, encrypted cookie sessions, single-flight refresh-token rotation, redirect-free silent SSO and single sign-out.

Frontend Developer · Kreditek NG (Remote) Aug — Oct 2024

- Built the public site and member dashboard for a cooperative fintech — membership registration, recurring savings contributions, loan applications against savings, and transaction history.
- Routed every payment path (membership, contributions, repayments, card tokenization) through a single Paystack service; hybrid state model with Redux Toolkit for global state and Context reducers with a staleness cache for page-scoped data.

Frontend Developer, WordPress & PHP · Cyber Technologies 2023 — 2024

- Built WooCommerce stores on block-based full-site-editing themes, with product filtering, cart logic and checkout flows.
- Developed custom plugins in PHP and MySQL — post types, shortcodes, admin widgets, database-driven content — against the WordPress REST API; added payment gateways and applied technical SEO.

Frontend Developer · 3io Studios (Remote) Jan — Mar 2023

- Led the frontend of **Cosgrove Africa**, a luxury real estate platform, using React and TypeScript over Laravel with Inertia.js — around 40% faster load times than the previous build.
- Protected enquiry and agent-registration forms with reCAPTCHA v3 and honeypot fields; media through Cloudinary CDN; Sentry for production monitoring; WCAG/ADA compliance throughout.

Founder · Kodeguru Tech Solutions Ongoing

- Client web development plus business automation: n8n workflows for lead capture, validation, de-duplication, scoring and routing, with dedicated error handling; email-triggered document pipelines that extract invoice data using Claude and file it automatically.
- GoHighLevel builds covering CRM, calendar and booking sync, pipelines and full appointment-lifecycle automation. Also delivered the launch site for **CloserLook VR** (Steam, Meta Quest, SideQuest).

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, PHP, HTML, CSS
Web	React 19, Next.js 16 (App Router), React Router, Redux Toolkit, Tailwind CSS, Vite, SASS, WordPress / WooCommerce
Mobile	React Native (pure CLI), FCM & APNs push notifications, App Store and Play Store releases
Platform	Node, REST APIs, OIDC / OAuth 2.0 & PKCE, WebSockets, PWA, Paystack, Flutterwave, Stripe, KYC
Automation	n8n, GoHighLevel, Claude API, MCP servers, Google Workspace APIs
Practice	Git, GitHub Actions, Vercel, Netlify, systemd / PM2, Sentry, Jest & RTL, WCAG / ADA accessibility

EDUCATION

B.Eng, Petroleum Engineering · Delta State University, Abraka 2017
